

Aichi Biodiversity Target	NESDP Strategic Interventions	NESDP Strategic/Sectoral Objectives
1: Awareness increased	Sensitise the youth to environmental problems and the concept of sustainable development	To foster among young people ideals of social harmony, mutual respect, cultural heritage, national values and international cooperation
2: Biodiversity values integrated	<p>Enforce land-use zoning legislation to protect the critical ecological balance and biodiversity</p> <p>Develop a comprehensive system for the sustainable management of land resources</p> <p>Develop national land-use policies and land-use zoning plans</p> <p>Develop and employ methodologies for the economic assessment and accounting of natural resources</p> <p>Enhance the capacity at the Ministry responsible for the environment as well as strengthen its ability to collaborate with other agencies</p>	<p>To manage and guide the growth and development of the state in a sustainable manner</p> <p>To optimise the use of limited land space</p> <p>To conserve the natural resources of the country through effective utilisation and management</p> <p>To ensure a clean, safe, and healthy environment</p>
3: Incentives reformed	<p>Establish incentive regimes to encourage compliance with land use policy</p> <p>Provide incentives for the protection and restoration of natural resources</p> <p>Develop fiscal and other policy incentives to encourage environmentally sustainable imports and the use of local products with degradable content</p>	<p>To promote the sustainable use of land, forestry and marine resources</p> <p>To ensure a clean, safe, and healthy environment</p>
4: Sustainable consumption and production	<p>Manage terrestrial, marine and atmospheric resources, organisms and ecosystems in a sustainable manner</p> <p>Develop fiscal and other policy incentives to encourage environmentally sustainable imports and the use of local products with degradable content</p> <p>Develop a more authentic tourism product that protects the environment and utilises as far as possible local inputs</p> <p>Promote the sustainable use of land, forestry, and marine resources</p> <p>Encourage "green growth"</p>	<p>To ensure a clean, safe and healthy environment</p> <p>To stimulate growth in the tourism sector</p> <p>To revitalise the agriculture and fisheries sector</p> <p>To create jobs and reduce the level of unemployment</p>

Aichi Biodiversity Target	NESDP Strategic Interventions	NESDP Strategic/Sectoral Objectives
<p>5: Habitat loss halved or reduced</p>	<p>Preserve critical forest areas</p> <p>Develop appropriate measures to restore and protect the natural resources of the country</p> <p>Strengthen the existing legal and institutional frameworks to encourage integrated approaches to marine management and to reduce environmental degradation</p> <p>Manage and restore biological diversity where possible</p> <p>Minimise damage to beach and shoreline integrity and marine ecosystems</p>	<p>To optimise the use of limited land space</p> <p>To conserve the natural resources of the country through effective utilisation and management</p> <p>To optimise the economic contribution made by ocean resources</p> <p>To effectively manage biological resources</p> <p>To reduce the adverse impact of climate change</p>
<p>6: Sustainable management of marine living resources</p>	<p>Manage terrestrial, marine and atmospheric resources, organisms and ecosystems in a sustainable manner</p> <p>Establish and implement a comprehensive integrated ocean governance policy</p> <p>Promote the sustainable use of land, forestry and marine resources</p> <p>Develop and employ methodologies for the economic assessment and accounting of marine resources</p>	<p>To ensure a clean, safe, and health environment</p> <p>To revitalise the agriculture and fisheries sector</p> <p>To optimise the economic contribution made by ocean resources</p>
<p>7: Sustainable agriculture, aquaculture and forestry</p>	<p>Minimise the negative impact of climate change on agriculture and human health</p> <p>Promote the sustainable use of land, forestry and marine resources</p> <p>Deepen linkages between agriculture and other sectors, particularly tourism, manufacturing and the environment</p> <p>Implement soil conservation measures in agriculture districts</p> <p>Enact and enforce appropriate legislation for agro-ecological zoning</p> <p>Develop and enforce regulations/practices prohibiting agriculture activities and systems of production that are environmentally degrading</p>	<p>To revitalise the agriculture and fisheries sector</p> <p>To reduce the adverse impact of climate change</p> <p>To promote the sustainable use of land, forestry and marine resources</p> <p>To improve the legislative and institutional framework of the agricultural sector</p> <p>To manage and guide the growth and development of the state in a sustainable manner</p>

Aichi Biodiversity Target	NESDP Strategic Interventions	NESDP Strategic/Sectoral Objectives
8: Pollution reduced	<p>Minimise, where possible, the discharge of pollutants in soils, water, air and the natural environment</p> <p>Adopt and implement appropriate measures to adequately manage solid and liquid waste including hazardous waste and atmospheric pollutants</p> <p>Develop a sustainable waste management system</p> <p>Strengthen the nationwide waste management system</p>	To ensure a clean, safe, and healthy environment
9: Invasive alien species prevented and controlled	—	—
10: Pressures on vulnerable ecosystems reduced	<p>Develop and implement a Coastal Area Management Plan</p> <p>Strengthen coastal zone management system</p> <p>Minimise damage to beach and shoreline integrity and marine ecosystems</p> <p>Develop appropriate legislative and regulatory framework, for proper environmental management and institutional systems for responding and mitigating effects of climate change</p> <p>Manage terrestrial, marine and atmospheric resources, organisms and ecosystems in a sustainable manner</p>	<p>To conserve the natural resources of the country through effective utilisation and management</p> <p>To promote the sustainable use of land, forestry and marine resources</p> <p>To reduce the adverse impacts of climate change</p>
11: Protected areas increased and improved	Develop alternative and sustainable livelihood programmes for local communities in protected areas	To conserve the natural resources of the country through effective utilisation and management
12: Extinction prevented	—	—
13: Genetic diversity maintained	—	—

Aichi Biodiversity Target	NESDP Strategic Interventions	NESDP Strategic/Sectoral Objectives
14: Ecosystems and essential services safeguarded	<p>Improve the protection and management of water resources</p> <p>Develop measures to promote sustainability of the water supply</p> <p>Develop and implement an Integrated Watershed Management Plan</p> <p>Strengthen the existing Integrated Watershed Management Plan</p> <p>Discontinue squatting, farming, and other human activities around major water catchments</p> <p>Implement appropriate water management practices including reforestation, soil conservation, and river bank stabilisation</p> <p>Institute measures to conserve biodiversity and protection of the watershed</p>	<p>To ensure an adequate, safe, reliable, and sustainable supply of water</p> <p>To promote the sustainable use of land, forestry and marine resources</p>
15: Ecosystems restored and resilience enhanced	<p>Develop appropriate measures to restore and protect the natural resources of the country</p> <p>Manage and restore biological diversity where possible</p> <p>Adopt measures to restore environmental degraded areas</p> <p>Provide incentives for the protection and restoration of natural resources</p>	<p>To conserve the natural resources of the country through effective utilisation and management</p> <p>To effectively manage biological resources</p>
16: Nagoya Protocol in force and operational	—	—
17: NBSAPs adopted as a policy instrument	Encourage the adherence to St. Vincent and the Grenadines' commitments under multilateral environmental agreements	To ensure a clean, safe, and healthy environment

Aichi Biodiversity Target	NESDP Strategic Interventions	NESDP Strategic/Sectoral Objectives
18: Traditional knowledge respected	<p>Develop an operational participatory mechanism to facilitate effective involvement of the farming community in policy formulation</p> <p>Adopt a participatory approach to problem analysis [in the agriculture and fisheries sector] through community consultations</p> <p>Promote greater awareness of Vincentian heritage, including its pre-Columbian past, and use of authentic indigenous cultural items and services</p> <p>Encourage the documentation and preservation of Vincentian culture</p>	<p>To strengthen policy formulation and framework for agricultural development</p> <p>To preserve, maintain and promote the cultural heritage of St. Vincent and the Grenadines</p>
19: Knowledge improved, shared and applied	<p>Advance research on biological resources</p> <p>Upgrade the system for the collection, monitoring and management of hydrological and other data/information on water resources</p>	<p>To conserve the natural resources of the country through effective utilisation and management</p> <p>To ensure an adequate, safe, reliable and sustainable supply of water at affordable prices</p>
20:	—	—
